

Innovation competition

We are looking for people to a unique team with the capacity to shape tomorrow's globally sustainable and circular economy

The innovation competition focuses on future solutions in nutrition and health in a society where plastic is a considerably more expensive resource than today.

We will start from the needs of nutrition and health, not the problems, and ask ourselves how a truly sustainable system could look in the future.

Two teams of participants from different parts of society are competing to find the most sustainable solutions. The participants' will and ability to look beyond short-term solutions, as well as find strategic collaborations with unexpected partners will be an asset.

RE:

SOURCE

Who? Two teams with 8-10 participants each. The teams are put together by the competition management.

How? By combining varied and extraordinary skills within the teams with inspiring external resources.

When? The teams meet for five internships (1.5-day) in 2019, with preliminary start on April 29-30.

Application: <https://kompetens-resource-sip.se/>

Application deadline: February 15, 2019

The competition is organized by RE:Source in collaboration with the Swedish Environmental Protection Agency.

Evalena Blomqvist, programme manager RE:Source, evalena.blomqvist@resource-sip.se

Dennis Pamlin, pre-study, Sustainable business models, dennis@21st-century-frontiers.net

Said about previous competition (Transformative infrastructure):

"It is only when we lift our eyes high enough that we can see completely new ways to solve today's problems. Another positive effect was that we brought home ideas to our own business, which accelerated the development already today."

Thomas Fägerman, manager Swerock AB

"It was valuable that we had to get away from our everyday roles and cooperate in new constellations. I bring new ideas and contacts with me from the competition."

Martin Andersson, manager Skanska Sverige AB
